PELLECOME™ LLC TO LAUNCH NEW HORMONE PELLET DELIVERY SYSTEM AT THE AESTHETIC SHOW 2018

Randolph, New Jersey – Pellecome™ LLC launches the Re3™ Advanced Pellet Delivery System. This novel medical device is the vision of founder, Dr. Enrique G. Jacome, a board-certified Ob-Gyn from Rancho Mirage, California who discovered a better way to provide hormone balance to patients other than methods previously available. He created the Re3™ Advanced Pellet Delivery System improving the hormone pellet insertion process – making it easier, safer, and more reliable.

Dr. Jacome's a specialist in hormone replacement therapy since 1995. In 2002, Dr. Jacome turned his focus to natural hormone replacement therapy, using timed-release Bio-identical Hormone Replacement Therapy (BHRT) pellet implants. Compounded using hormones biologically identical to those created naturally in the body, fused pellet implants are the size of a grain of rice and are inserted under the skin in a simple office procedure.

"After years of using a standard trocar and forceps to perform the insertion procedure, it was obvious to me that the procedure had to be improved to make it more accessible to a wider segment of physicians. I think the system that I have perfected is the best solution for expanding BHRT to the millions of patients that can benefit from this therapy."
– Dr. Enrique G. Jacome

Pellecome's CEO, Melissa Vinci-Rainis, "We are so excited to bring Dr. Jacome's vision to market; the opportunity that this product represents is truly innovative. It is our dedicated purpose to maximize the penetration of BHRT into as many specialties as possible. There really is no limit to the variety of physicians that can take advantage of this revenue stream in their practice."

The Re3™ Advanced Pellet Delivery System includes the following:

Ergonomically designed INSERTION TOOL with NEEDLE GUIDE ensures pellets are always delivered in target subcutaneous tissue plane and in a linear retrograde manner.

Precision SCALPEL ensures that incision is exact width and depth to facilitate insertion procedure and helps minimize risk of extrusion or muscle pain.

Convenient FUNNEL helps prevent loss of pellets during loading process and secures pellets for safe and efficient use providing an aseptic pellet transfer.

Pellecome™ LLC is a company of scientists and clinicians established to provide safer, faster and more convenient delivery of BHRT. Pellecome was created with a passion for helping patients achieve a balanced endocrine environment using measured hormone treatments with an improved, simplified method of hormone pellet administration. Streamlining the therapeutic process allows HCPs with various levels of experience to incorporate BHRT into their practices.
