**PELLECOME™ LLC TO INTRODUCE INNOVATIVE WEIGHT LOSS PELLET TO BE USED
WITH ITS ADVANCED PELLET DELIVERY SYSTEM**

ADD NEW REVENUE STREAM TO YOUR PRACTICE

Randolph, New Jersey – Pellecome™ LLC is announcing the introduction of a new treatment for weight loss in 2019. Similar to pellets currently used for Bioidentical Hormone Replacement Therapy (BHRT), pellets used for weight loss are compounded and delivered using the same technology, Pellecome's patent pending Re³™ Advanced Pellet Delivery System. The Pellecome system provides Health Care Providers (HCPs) at any skill level a safe and consistent pellet insertion method for BHRT, and that same technology is now being brought to weight loss therapy. Pellets are inserted under the skin and absorbed by the body over a period of months making it an easy and convenient treatment for patients, and providing the doctor assurance of dosing effectiveness and patient compliance.

"Applying our innovative technology in this therapeutic area has enabled Pellecome to provide a new opportunity for an easy, safe, and convenient treatment for weight loss," said Melissa Vinci-Rainis, CEO. "This new treatment option is a novel approach that supports our company's mission of helping our patients achieve their goals of good health and well-being," she continued.

BHRT and weight loss therapy can be added to any practice to increase revenue from day one. Pellecome seeks to create a collaborative relationship with each HCP to help maximize revenue in their practice by combining the HCP's specialty with BHRT and weight loss. Pellet therapy requires return visits after the pellets are fully absorbed, typically about every 3 months. Patients returning for treatment provide the opportunity for the HCP to offer additional services and generate additional revenue.

The Re³™ Advanced Pellet Delivery System includes an ergonomically designed insertion tool with needle guide, precision scalpel and convenient funnel to ensure pellets remain sterile. Pellecome's device provides an easy and consistent method for BHRT and weight loss pellet insertion that sets a new standard in the industry and provides the best outcomes for patients.

Pellecome provides the opportunity for HCPs of any specialty to learn about the benefits available to their patients by adding pellet therapy to their practice and get hands-on experience using the Re³™ Advanced Pellet Delivery System with the creator of the device, Enrique Jacome, MD, FACOG. Dr. Jacome conducts the one-on-one training for all attendees, including live pellet insertion.

Pellecome's two-day course is intended for those who want to learn about Hormone Optimization for men and women including Pellet Therapy, patient and practice management and hands-on patient interaction. The one-

day course is intended for those who currently offer Pellet Therapy in their practice or have completed a BHRT training course. We offer these training courses in Rancho Mirage, CA. and Boca Raton, FL.

The Re³™ Advanced Pellet Delivery System makes BHRT therapy easier, safer and more reliable. To view full course details [click here](#) and to register [visit our website](#).
